

CRAZY NEWSPAPER

Let's see if we can put some newspaper in water, but have it stay dry!

Materials:

- A deep bowl or pot full of water
- A glass about 5 inches tall
- A piece of newspaper or similar

Crumple the newspaper into a ball and push it into the bottom of the glass. Make sure it's tight so that if you turn the glass upside down, it won't fall out.

Turn the glass upside down, and hold the bottom to put it completely into the pot of water, upside down. Hold it there, then take it out.

Check your newspaper! Is it dry?

The air in the glass can't escape, so it forms a protective bubble keeping the water and newspaper from touching!
